Slow Roast Coffee

Taste to the smallest detail

We are **selective** when purchasing our coffee beans; and are therefore higher in **quality**.

We then **roast** the beans **longer** than the usual coffee roasting, so that the **flavors** in the coffee bean have more **time** to be released. Therefore we get the best flavor out of the **green** coffee.

This is called **Slow Roasting** and gives the coffee a **richer** and **powerful** taste.
